NAVY BUREAU SPENT \$77,000 EVERY DAY

**ADMIRAL GRIFFIN MAKES
ANNUAL REPORT.**

**America Could Have Communicated With France
by Radio.**

Washington, Dec. 12.—One month before the armistice with Germany ended the war, the American navy was operating a total of 1,858 vessels of all descriptions, of which 264, carrying 43,000 men, were actively participating in the war in European waters.

These figures were disclosed today in the annual report of Rear Admiral Griffin, chief of the bureau of steam engineering. Daily expenditures of the bureau during the war year covered by the report exceeded \$77,000.

Admiral Griffin said the regular navy on the date of his report consisted of 370 ships, supplemented by 35 vessels from the coast guard, light house service, coast and geodetic survey and fish commission. In addition the navy was then operating 337 converted merchant craft, yachts and the like, and the naval overseas transport service, consisting of 247 shipping board and other supply vessels, with 112 more about to be commissioned. Construction under way for the regular navy at that time included 276 new ships of all kinds and 12 tugs.

Since the United States became a belligerent, the report states, "the magnitude of the engineering work of the navy, both mechanical and electrical, not only in its actual amount but in the rapid development of facilities for its execution has been without parallel for the same period of time in the history of the world's navies."

The report makes the first official announcement regarding development of the submarine detection devices and shows that American equipment for this purpose has been placed aboard both British and French naval craft. Details are not disclosed, however, the report in this connection confining itself to the following paragraph:

"Previous to July 1, 1917, there were two devices for submarine detection in service. One was the Fessenden oscillator, primarily intended for sending and receiving underwater signals; the other was a device developed by the General Electric company. Since then eight other devices for submarine detection have been developed and made in quantity, not only for our own navy, but for the British admiralty and the French ministry of marine. Modified forms of these devices have also been designed for use in protection of the Atlantic coast of the United States."

Taking up naval radio development, Admiral Taylor shows that through the new high power plant at Annapolis and the station built by the navy in France and hearing completion provision had been made which would have kept the United States government in touch with its forces in Europe constantly even if every submarine cable had been cut. The radio communication system has been vastly extended, eighty-four additional main stations having been built during the year.

Striking achievements are noted in development of radio outfits for naval aircraft. Communication from machines in flight to short stations is now possible at a distance of 200 miles, the report says, while the land station can communicate with a machine in air fifty miles away. Through the radio telephone the aircraft can talk to stations sixty miles away and receive verbal instructions from stations fifteen miles distant. Both systems have been employed with the coastal patrol maintained by aircraft.

SPORT COMMENT

Yale University is swinging back into its athletic stride immediately, now that the students' army training corps at that place has been demobilized. Baseball, rack, basketball, hockey and swimming teams and the rowing crew have been organized. The speed with which Yale is taking up its sports again has much promise in it.

The suggestion has been made that the Dixie baseball league stage a post season series for the benefit of wounded soldiers. The Southern, Texas, South Atlantic and others would be included. It is a generous idea, but before any benefit games are arranged the financial rocks which line the 1919 highway had better be taken up. Better wait to see how the road is a little farther on.

It is rumored that Lieut. David Fultz, a leading spirit two or three years ago of the Baseball Players' Fraternity, may be selected, as the next president of the New International league. The choice could not be such a very bad one, as a man who has seen the players' side of the game can carry on the game with much smoother fashion than one who has not.

Little old Pal Moore, formerly of Memphis and now of the United States navy, et al., pulled quite a surprise, 'tis said, when he defeated Jimmy Wilde, English bantamweight champion, in London yesterday. Says the report: "Wild is a favorite here and the decision was unpopular." Yes, but not to Moore.

American boxers have won five finals in the lightweight division in the closing bouts of the inter-allied boxing tournament. The American army team added four points to its total, while the American navy's total was advanced 2. The final point standings of the American teams were: Army, 25; navy, 21. The British army led with 50 points.

The press report says that the American boxers were unaccustomed to their surroundings, the ring being flanked on all sides by royal boxes and on the other by a magnificent pipe organ. But you can't make us believe that the Yanks lost any nerve by the presence of royalty.

TOBACCO PROFITEERING

Kentucky Growers Get Thrice Pre-War Price.

Louisville, Ky., Dec. 8.—Kentucky farmers, who produce about thirty per cent. of the country's tobacco, have experienced unprecedented prosperity since 1915, and this autumn were able to get nearly three times the price with which they would have been content at the beginning of the war.

Eighty per cent. of the 250,000,000 pounds of burley tobacco used in the United States comes from Kentucky. In 1914 prices for all qualities of leaf lugs and trash averaged between ten and twelve cents a pound, while the price for the heavy, dark export type of tobacco grown in the "black patch" of western Kentucky climbed from six cents to sixteen cents.
